

功能	ATSQL
创建数据库	<pre>create table chufang2(id int, name varchar(100), mename varchar(100))as validtime;</pre>
时态查询	<pre>validtime select * from student;</pre> <pre>validtime select * from student order by course_id;</pre>
条件时态查询	<pre>validtime select * from student where course_id = '100001';</pre>
时间跨度查询	<pre>validtime select interval month > 24 * from student;</pre> <pre>validtime select interval month < 24 * from student;</pre> <pre>validtime select interval month = 24 * from student;</pre> <pre>validtime select interval year > 24 * from student;</pre> <pre>validtime select interval day > 24 * from student;</pre> <pre>validtime select interval hour > 24 * from student;</pre> <pre>validtime select interval minute > 24 * from student;</pre>

	student;
	validtime select interval second > 24 * from student;
时间区间查询	validtime period [date '2013-1-1' - date '2014-7-1'] select * from student;
时间合并查询	validtime select projection * from teach;
	validtime select projection sid, vts_timeDB, vte_timeDB from student;
多表连接查询	validtime select * from courses, student where courses.cid = student.course_id;
起始时间条件 查询	validtime select * from student where vts_timeDB < '2013-1-1';
	validtime select * from student where vts_timeDB < '2013-1-1';
	validtime select * from student where vts_timeDB = '1998-12-23 11:44:11.0';
结束时间条件 查询	validtime select * from student where vte_timeDB = '2012-02-03 09:31:27.0';
	validtime select * from student where vte_timeDB > '2013-1-1';
	validtime select * from student where vte_timeDB < '2013-1-1';

时间连接查询

```
validtime select * from student ,courses where  
student.course_id=courses.cid;
```
